Clavister backgrounder

Clavister is a recognised leading network security vendor delivering sustained commercial advantage to organisations around the world by protecting them from the business disruption and financial loss that network security breaches can cause. The company provides a range of network security solutions that offer protection from attacks in both a physical and virtual environment, from both internal and external sources.

Founded in 1997 by its current President and Chief Executive Officer, Peter Johansson, the Clavister team steps away from the traditional security mindset to provide solutions which feature in-built flexibility and functionality to combat the known hazards of today and the unknown threats of tomorrow.

Customers and markets

Headquartered in Sweden, Clavister's solutions are sold through International sales offices, distributors, and resellers throughout EMEA and Asia.

It has built strategic alliances with leaders such as Ericsson, VMware, RadiSys, Kaspersky and SAAB. Its customer base includes Terremark (Worlds largest data center), Orange France, E.ON (worlds largest privately owned energy company), Regus, Softbank (Telecom operator in Japan), Bwin, the Hamburg Stock Exchange, France Telecom, the German Army and China Power to name but a few.

Telecom operators are the key focus for the company's most recent launch of its Clavister Slipstream™ Network Operating System. Mid-sized and enterprise companies are the focus for Clavister's branded products which are delivered through distribution channels and increasingly by system integration partners. Its Original Equipment Manufacturer (OEM) business serves Small and Medium Enterprises (SME), the telecommunications industry and service-oriented computer hardware vendors.

Recent World Firsts

Clavister Slipstream™ empowers Clavister's most recent suite of solutions aimed at the Telco/Carrier market. This release marks the world's fastest network security systems for telecom operators and offers robust, resilient, and seamlessly scalable security performance at rates up to 560 Gbps firewalling, 280 Gbps IPSec VPN, 280 million connections and 2,8 million concurrent VPN Tunnels. <http://www.clavister.com/en/about-us/press-media/clavister-news/Clavister-unveils-the-worlds-fastest-security-solutions-for-telecom-operators/>

Clavister also boasts an unprecedented track record in pioneering network security solutions including the two largest deployments of Virtual Security Gateways in the world to date - Regus with 1,000 deployed Virtual Security Gateways, and another 1,500 with E.ON, the worlds largest privately owned energy company.

Solutions

Our solutions span physical, virtual and cloud network security. In simplest terms, with these solutions in place, one can monitor network traffic, protect critical business assets, block undesirable surfing, protect against intrusion, viruses, worms, Trojans and denial-of-service attacks. Solutions are easily managed and are seamlessly scalable, adapting to the needs of any customer from small organisations to large Internet Service Providers, Managed Security Service Providers or multimedia-ready telecom operators.

Vision

Our Vision is to be a world-leading specialist in Network Security and a recognized leader in Virtual and Cloud security.

Clavister will be known for its superior technology, track record and personal service over the ordinary.

Our desire is to deliver exceptional value to our customers, partners and shareholders.

Clavister is the natural choice today and in the future.

Mission (What We Do)

Clavister specializes in Network Security – physical, virtual and cloud security.

We protect organizations around the world from security breaches of their IT networks which can cause loss of integrity, disruption, financial loss - issues which can negatively impact the company value, brand and business.

Our company culture and team spirit is founded on a demanding, stimulating and rewarding environment where everyone is a champion.

About Clavister Slipstream™,

“Clavister Slipstream™, patent pending, is setting a new standard in network security globally. It is our network security operating system and the engine behind our newest series of solutions. It features built in virtualization, IPv6, carrier grade resilience with 99.9999% availability, comprehensive application recognition, advanced signature detection and the ultimate in reporting and statistics. Our enterprise version of Slipstream will be available in 2011.

The name derives from the physical phenomenon “slipstream”; the accelerating pace of technological development creates a slipstream, and thereby inherent efficiency in the way we operate.
